

RGM's newest model features a Shipboard Maintenance Program and additional data storage capabilities!

I.S.I.S. 400ME

RGM Industries Inc., the leader in INTEGRATED SHIPBOARD INFORMATION SYSTEMS presents the Model 400ME. The 400ME continues the trusted modular design of the I.S.I.S. family. I.S.I.S. products use advanced fiber optic networks, intelligent data acquisition units, proven software and factory authorized sensor options to create a system that is reliable, easy to use and easy to maintain.

The 400ME offers a convenient "gauge" graphic package. The system operates with a switchpad with four command buttons; no keyboard, support equipment or computer skills are required. Commands are easily executed through on screen navigation menus. Alarms are reported immediately in plain language without the requirement to navigate to an "alarm area" regardless of which screen or command operation is underway. The Model 400ME interfaces directly with onboard audio/visual equipment to allow the distribution of information anywhere onboard.

The Model 400ME offers integration with most OEM diesel mechanical engines via analog sensors. The engines are monitored in real time to provide historical operating data that can reduce insurance costs, simplify service responsibilities and increase resale value. I.S.I.S. Model 400ME functions as the primary engine monitoring system potentially eliminating the need for mechanical gauges and wiring. Critical engine alarms are preset but can be changed by the owner/captain within prescribed limits. Individual sensor alarm values and screen attributes may be changed through a secure protected screen. Password protection prevents unauthorized system tampering.

With the Model 400ME the owner/captain can deploy a technologically advanced, proven, world class mega yacht "glass cockpit" in a package designed for the mid-size vessel while significantly reducing build/retrofit costs.
